# Preface

In this volume we present a systematic and detailed exposition of the theory of function spaces in an Euclidean setting. Particular emphasis is put on Besov and Bessel potential spaces which form the frame for the study of parabolic differential equations in the next volume.

The presentation includes several new features which lets it stand out from other accounts. First, it consistently develops anisotropic spaces. Second, it expounds the whole theory for functions and distributions taking their values in Banach spaces on which we impose only the necessary restrictions. Thus none in the case of Besov spaces, except for reflexivity assumptions in duality theorems. Third, the theory is set forth for spaces whose elements are defined on rectangular corners of Euclidean spaces. By this we pave the way for the investigation of function spaces on Riemannian manifolds, possibly possessing corners and other singularities. This is also put on hold for the third volume.

Our approach builds basically on two cornerstones: on Fourier analysis and multiplier theorems, and on extension-restriction techniques. By this we can give a unified presentation incorporating, in particular, Sobolev–Slobodeckii and Hölder space scales. The rather detailed study of these spaces, which are of great importance for the investigation of differential equations, is a further characteristic trait of our treatise.

This volume consists of three chapters and an appendix. The first chapter, which is of rather technical nature, collects preparatory material. It supplies a firm basis for the main text which covers Chapters VII and VIII. The first one thereof contains a systematic treatment of anisotropic vector-valued function spaces on corners. In the second one we give a detailed and unified account of trace and boundary operators.

For the reader's convenience, in the appendix we include a downscaled version of L. Schwartz' theory of vector-valued distributions by admitting only Banach spaces as targets. Particular weight is given on tensor products and convolutions since, in the main text, we make use of such results. It should be mentioned that, already in 2003, I had put a preliminary, slightly more comprehensive version of this appendix on my homepage.

---

<sup>1</sup>There is nothing on earth that could not be improved.

In essence, this volume forms a profound expansion and amelioration of my earlier lecture notes ‘Anisotropic Function Spaces and Maximal Regularity for Parabolic Problems. Part 1: Function Spaces’ [Ama09]. Besides of adding much more material, I have corrected numerous flaws and imprecisions which observing readers have brought to my attention.

Once more, I could rely on the help of Pavol Quittner, Gieri Simonett, and Christoph Walker. They read critically and carefully large parts of the first draft, pointed out plenty of mistakes and misprints, and suggested very advantageous changes and improvements. Sincere thanks are given to all of them for their generous support.

Last but not least, I could again experience the immensely valuable support of my wife Gisela who transformed countless barely readable preliminary versions and revisions into  $\text{\TeX}$  files and provided this perfect layout on hand. I am more than deeply grateful to her.

Zürich, January 2019

Herbert Amann

# Contents

<b>Preface</b> . . . . .	v
<b>Notations and Conventions</b> . . . . .	1
<b>Chapter VI Auxiliary Material</b>	
<b>1 Restriction-Extension Pairs</b>	
1.1 Smooth Functions on Corners . . . . .	4
Corners . . . . .	4
Restriction-Extension Operators . . . . .	6
Approximation by Test Functions . . . . .	9
1.2 Tempered Distributions on Corners . . . . .	10
Duality Formulas . . . . .	12
The Main Theorem . . . . .	14
1.3 Duality . . . . .	16
1.4 Notes . . . . .	18
<b>2 Sequence Spaces</b>	
2.1 Duality of Sequence Spaces . . . . .	19
Definitions and Embeddings . . . . .	19
Duality Pairings . . . . .	21
2.2 Weighted Sequence Spaces . . . . .	25
Image Spaces . . . . .	25
Embeddings and Duality . . . . .	26
2.3 Interpolation . . . . .	28
Unweighted Spaces . . . . .	28
Weighted Spaces . . . . .	29
2.4 Notes . . . . .	31
<b>3 Anisotropy</b>	
3.1 Anisotropic Dilations . . . . .	32
Weight Systems . . . . .	32
Dilations . . . . .	33

3.2	Quasinorms . . . . .	39
3.3	Parametric Augmentations . . . . .	42
	Augmented Quasinorms . . . . .	43
	Positive Homogeneity . . . . .	45
	Differentiating Inverses . . . . .	47
	Slowly Increasing Functions . . . . .	49
3.4	Fourier Multipliers and Multiplier Spaces . . . . .	52
	Elementary Fourier Multiplier Theorems . . . . .	52
	Fourier Multiplier Spaces . . . . .	54
	Resolvent Estimates . . . . .	55
3.5	Multiplier Estimates . . . . .	57
	Resolvent Estimates for Homogeneous Symbols . . . . .	58
	Functions of Homogeneous Symbols . . . . .	59
	Dunford Integral Representations . . . . .	61
	Powers and Exponentials . . . . .	65
3.6	Dyadic Partitions of Unity . . . . .	67
	Preliminary Fourier Multiplier Theorems . . . . .	68
3.7	Notes . . . . .	72

## Chapter VII Function Spaces

### 1 Classical Spaces

1.1	Bounded Continuous Functions . . . . .	78
	Banach Spaces of Bounded Continuous Functions . . . . .	78
	Vector Measures . . . . .	82
1.2	Sobolev Spaces . . . . .	84
	Regular Distributions . . . . .	84
	Basic Definitions . . . . .	84
1.3	Restrictions and Extensions . . . . .	86
1.4	Distributional Derivatives . . . . .	90
1.5	Reflexivity . . . . .	93
1.6	Embeddings . . . . .	96
1.7	Notes . . . . .	98

### 2 Besov Spaces

2.1	The Definition . . . . .	99
	Preliminary Estimates . . . . .	100
	A Retraction-Coretraction Pair . . . . .	102
	The Final Definition . . . . .	104
2.2	Embedding Theorems . . . . .	104
	Little Besov Spaces . . . . .	107
	Embeddings With Varying Target Spaces . . . . .	109
2.3	Duality . . . . .	109
2.4	Fourier Multiplier Theorems . . . . .	112

2.5	Operators of Positive Type . . . . .	115
	Resolvent Estimates . . . . .	115
	A Representation Theorem . . . . .	117
	Bounded Imaginary Powers . . . . .	118
	Interpolation-Extrapolation Scales . . . . .	119
2.6	Renorming by Derivatives . . . . .	120
	Equivalent Norms . . . . .	121
	Sandwich Theorems . . . . .	123
	Sobolev Embeddings . . . . .	124
2.7	Interpolation . . . . .	125
	Real and Complex Interpolation . . . . .	125
	Interpolation with Different Target Spaces . . . . .	126
	Embeddings of Intersection Spaces . . . . .	127
	Interpolation of Classical Spaces . . . . .	128
2.8	Besov Spaces on Corners . . . . .	128
2.9	Notes . . . . .	131
<b>3</b>	<b>Intrinsic Norms, Slobodeckii and Hölder Spaces</b>	
3.1	Commuting Semigroups . . . . .	133
3.2	Semigroups and Interpolation . . . . .	137
	Preliminary Estimates . . . . .	138
	Renorming Intersections of Interpolation Spaces . . . . .	141
3.3	Translation Semigroups . . . . .	146
3.4	Renorming Besov Spaces . . . . .	149
3.5	Intersection-Space Characterizations . . . . .	151
	Intersection Space Representations . . . . .	152
	Equivalent Norms . . . . .	153
	Nicol'skiĭ Spaces . . . . .	154
3.6	Besov–Slobodeckii and Besov–Hölder Spaces . . . . .	155
	Mixed Intersections . . . . .	155
	Slobodeckii, Hölder, and Little Hölder Spaces . . . . .	157
3.7	Little Hölder Spaces . . . . .	159
	Very Little Hölder Spaces . . . . .	164
3.8	Notes . . . . .	165
<b>4</b>	<b>Bessel Potential Spaces</b>	
4.1	Basic Facts, Embeddings, and Real Interpolation . . . . .	168
4.2	A Marcinkiewicz Multiplier Theorem . . . . .	171
4.3	Renorming by Derivatives . . . . .	173
4.4	Duality . . . . .	174
4.5	Complex Interpolation . . . . .	176
	A Holomorphic Semigroup . . . . .	176
	Interpolation with Different Target Spaces . . . . .	178

4.6	Intersection-Space Characterizations . . . . .	182
4.7	Notes . . . . .	185
<b>5</b>	<b>Triebel–Lizorkin Spaces</b>	
5.1	Maximal Inequalities . . . . .	188
	Preliminary Estimates for Sequences . . . . .	189
	Estimates for a Single Function . . . . .	193
5.2	Definition and Basic Embeddings . . . . .	196
	Equivalent Norms . . . . .	197
	Embeddings . . . . .	198
	Completeness . . . . .	199
5.3	Fourier Multiplier Theorems . . . . .	201
5.4	Interpolation . . . . .	202
5.5	Renorming by Derivatives . . . . .	203
	Sandwich Theorems . . . . .	203
5.6	Sobolev Embeddings and Related Results . . . . .	204
	Multiplicative Inequalities . . . . .	204
	Optimal Sobolev-Type Embeddings . . . . .	206
	Sharp Embeddings of Intersection Spaces . . . . .	207
5.7	Gagliardo–Nirenberg Type Estimates . . . . .	208
	Nonhomogeneous Inequalities . . . . .	208
	Homogeneous Estimates . . . . .	212
	Isotropic Multiplicative Inequalities . . . . .	215
	Sobolev Inequality . . . . .	216
	Parabolic Estimates . . . . .	218
5.8	Notes . . . . .	219
<b>6</b>	<b>Point-Wise Multiplications</b>	
6.1	Preliminaries . . . . .	222
	Continuity of Derivatives . . . . .	223
	Point-Wise Products . . . . .	224
6.2	Multiplications in Classical Spaces . . . . .	225
	Spaces of Bounded Continuous Functions . . . . .	225
	Sobolev Spaces . . . . .	226
	Spaces of Negative Order . . . . .	228
6.3	Multiplications in Besov Spaces of Positive Order . . . . .	229
6.4	Multiplications in Besov Spaces of Negative Order . . . . .	235
	The Reflexive Case . . . . .	235
	The Non-Reflexive Case . . . . .	237
6.5	Multiplications in Bessel Potential Spaces . . . . .	244
6.6	Space-Dependent Bilinear Maps . . . . .	245
6.7	Notes . . . . .	247

<b>7</b>	<b>Compactness</b>	
7.1	Equicontinuity . . . . .	249
	Compact Sets in $BUC$ . . . . .	249
	Compact Sets in $L_q$ . . . . .	250
7.2	Compact Embeddings . . . . .	253
	Compact Embeddings of Besov Spaces . . . . .	253
	Compact Embeddings of Hölder, Sobolev–Slobodeckii, and Bessel Potential Spaces . . . . .	255
7.3	Function Spaces on Intervals . . . . .	256
	Classical Spaces . . . . .	256
	Besov Spaces . . . . .	257
	A Retraction-Coretraction Theorem . . . . .	260
	Interpolations and Embeddings . . . . .	264
	The Rellich–Kondrachov Theorem . . . . .	265
7.4	Aubin–Lions Type Theorems . . . . .	266
	The General Result . . . . .	266
	Limit Cases . . . . .	267
	Applications . . . . .	267
7.5	Notes . . . . .	269
<b>8</b>	<b>Parameter-Dependent Spaces</b>	
8.1	Sobolev Spaces and Bounded Continuous Functions . . . . .	271
8.2	Besov and Bessel Potential Spaces . . . . .	274
8.3	Intersection-Space Characterizations . . . . .	277
8.4	Fourier Multipliers . . . . .	278
8.5	Notes . . . . .	280

## Chapter VIII Traces and Boundary Operators

<b>1</b>	<b>Traces</b>	
1.1	Trace Operators . . . . .	282
1.2	The Retraction Theorem . . . . .	286
1.3	Traces on Half-Spaces . . . . .	299
	Parameter-Dependence . . . . .	302
	General Besov spaces . . . . .	303
1.4	Spaces of Vanishing Traces . . . . .	304
	Sobolev–Slobodeckii Spaces . . . . .	304
1.5	Weighted Spaces . . . . .	310
	Weighted Lebesgue Spaces . . . . .	310
	Hardy Inequalities . . . . .	312
	Weighted Space Characterizations of Sobolev–Slobodeckii Spaces . . . . .	314
1.6	Further Characterizations of Spaces with Vanishing Traces . . . . .	317
	General Besov Spaces . . . . .	320

	Bessel Potential Spaces . . . . .	322
	Hölder Spaces . . . . .	323
1.7	Representation Theorems for Spaces of Negative Order . . . . .	324
	Spaces of Mildly Negative Order . . . . .	324
	Spaces of Strongly Negative Order . . . . .	326
	Duality of Sums and Intersections . . . . .	327
	Weighted Space Representations . . . . .	330
1.8	Traces for Corners . . . . .	330
	Traces on a Single Face . . . . .	331
	Vanishing Traces on Corners . . . . .	332
	Faces of Higher Codimensions . . . . .	332
	Compatibility Conditions . . . . .	334
	The Retraction Theorem for Corners . . . . .	335
1.9	Notes . . . . .	339
<b>2</b>	<b>Boundary Operators</b>	
2.1	Boundary Operators on Half-Spaces . . . . .	343
	Normal Boundary Operators . . . . .	344
2.2	Systems of Boundary Operators . . . . .	347
	The Boundary Operator Retraction Theorem . . . . .	348
	Embeddings with Boundary Conditions . . . . .	350
2.3	Transmission Operators . . . . .	353
	Patching Together Half-Spaces . . . . .	357
2.4	Interpolation With Boundary Conditions . . . . .	358
	Preliminaries . . . . .	358
	The Main Theorem . . . . .	360
	Generalizations . . . . .	365
	Complex Interpolation of Bessel Potential Spaces . . . . .	367
2.5	Notes . . . . .	368

## Appendix Vector-Valued Distributions

### 1 Tensor Products and Convolutions

1.1	Locally Convex Topologies . . . . .	370
	The Uniform Boundedness Principle . . . . .	370
	Hypocontinuity . . . . .	371
	Montel Spaces . . . . .	372
	Strict Inductive Limits . . . . .	372
	Smooth Functions . . . . .	373
	Test Functions . . . . .	373
	Rapidly Decreasing Smooth Functions . . . . .	374
	Slowly Increasing Smooth Functions . . . . .	374
	Spaces of Vector-Valued Distributions . . . . .	374

1.2	Convolutions . . . . .	375
	Convolutions of Distributions and Test Functions . . . . .	375
	Translation-Invariant Operators . . . . .	378
	Convolutions of Two Distributions . . . . .	378
	Elementary Properties of Convolutions . . . . .	380
	Convolutions of Temperate Distributions . . . . .	381
1.3	Approximations . . . . .	383
	Multiplications . . . . .	383
	Leibniz' Rule . . . . .	384
